

NBTC Microfluidics Minicourse Spring 2012

NBTC Minicourses provide researchers with practical, in-lab instruction in techniques that may be new to them. This class covers a variety of techniques used in microfluidic device fabrication, including:

- Cleanroom lab techniques and protocols
- Fabrication of microfluidic masters and soft lithography
- Device setup, packaging, and imaging
- Experimental Design: Materials requirements and limitations, etc.

Minicourse Sessions: Feb. 28-March 1; June 6-8

Minicourses are held in Duffield Hall at Cornell University, and are available to all researchers. Pre-registration for class is required due to small class sizes. Please contact Teresa Porri (tp252@cornell.edu) to register or make inquiries.
